

CLAIMS

1. A diagnostic test kit for testing material from a human body for indication of a condition present in said body comprising:

one or more diagnostic test strips for diagnosing said condition of said human body associated with said body material;

an instrument for extracting said material from said human body and facilitating placement thereof onto a portion of said test strip;

a reagent material for reacting on said test strip with said body material when placed thereon to reveal said condition;

an elongated, tubular enclosure for holding said test strips, extraction instrument and reagent material.

2. The diagnostic test kit of claim 1 wherein said instrument is a lancet for extracting blood from said human body.

3. The diagnostic test kit of claim 1 wherein said instrument is a swab or pipette.

4. The diagnostic test kit of claim 3 wherein said body material is selected from the group consisting of urine, saliva and fecal matter.

5. The diagnostic test kit of claim 1 wherein said reagent material is present on said test strips.

6. The diagnostic test kit of claim 1 wherein said reagent material is held in a container adapted for being held in said enclosure.

7. The diagnostic test kit of claim 6 wherein said container holding the reagent material is within a second, larger container adapted for receiving one of said test strips and for reaction of the reagent material with said human body material on the said test strip.

8. The diagnostic test kit of claim 1 wherein each said test strip includes a first portion proximate either of its opposed ends for gripping the test strip and a second portion proximate the other of the opposed end for receiving the body material and the reagent material, together with indicia present on said second portion for distinguishing from the first portion.
9. The diagnostic test kit of claim 1 wherein said enclosure is sufficiently small to be easily carried in a pocket of wearing apparel worn by a human being.
10. The diagnostic test kit of claim 9 wherein said enclosure includes a clip for attachment to the wearing apparel of a human being.
11. The diagnostic test kit of claim 9 wherein said enclosure carries a portion for identifying indicia.
12. A diagnostic test kit for testing material from a living body for indication of a condition present in said body, comprising:
 - one or more diagnostic test strips for reacting with said body material to indicate said condition;
 - an instrument for extracting said material from said body and facilitating placement thereof onto a portion of said test strip;
 - a container of liquid reagent material for reacting on said test strip with said body material when placed thereon to reveal said condition;
 - an elongated tubular enclosure for holding said test strips extraction instrument and reagent container; said enclosure including a removable closure and an exterior portion for placement of indicia and being of appropriate size to fit in the pocket of human apparel.

13. The diagnostic test kit of claim 12 wherein said instrument is a lancet for extracting blood from said human body.

14. The diagnostic test kit of claim 12 wherein said instrument is a swab or pipette.

15. The diagnostic test kit of claim 14 wherein said body material is selected from the group consisting of urine, saliva and fecal matter.

16. The diagnostic test kit of claim 12 wherein said container holding the reagent material is within a second, larger container adapted for receiving one of said test strips and for reaction of the reagent material with said human body material on the said test strip.

17. The diagnostic test kit of claim 12 wherein each said test strip includes a first portion proximate either of its opposed ends for gripping the test strip and a second portion proximate the other of the opposed end for receiving the body material and the reagent material, together with indicia present on said second portion for distinguishing from the first portion.

18. The diagnostic test kit of claim 12 wherein said enclosure includes a clip for attachment to the wearing apparel of a human being.

19. The diagnostic test kit of claim 12 wherein said enclosure carries a portion for identifying indicia.

20. The diagnostic test kit of claim 1, in which the test strip is contained in a transparent holder with only its lower end exposed.
